

15" Load Cell

The Model 531525 load sensors can be used for on-board weighing or stationary applications. Potential on-board applications would be log trucks and trailers or loads mounted on truck frames. Platform scales or tank/bin weighing would be potential stationary applications.

Specifications

- High strength heat-treated alloy steel
- Rated output
.9 mV/V at 25000 lbs
- Accuracy
Typical system error less than .4% full scale.
- Nickel plated for corrosion protection

Features

- Full twist compensation provides the highest accuracy
- Low-cost installation
- Large safety factor
- All load cells have matched outputs for direct replacement
- Easy installation
